

## Secure Displays for a Secure Environment

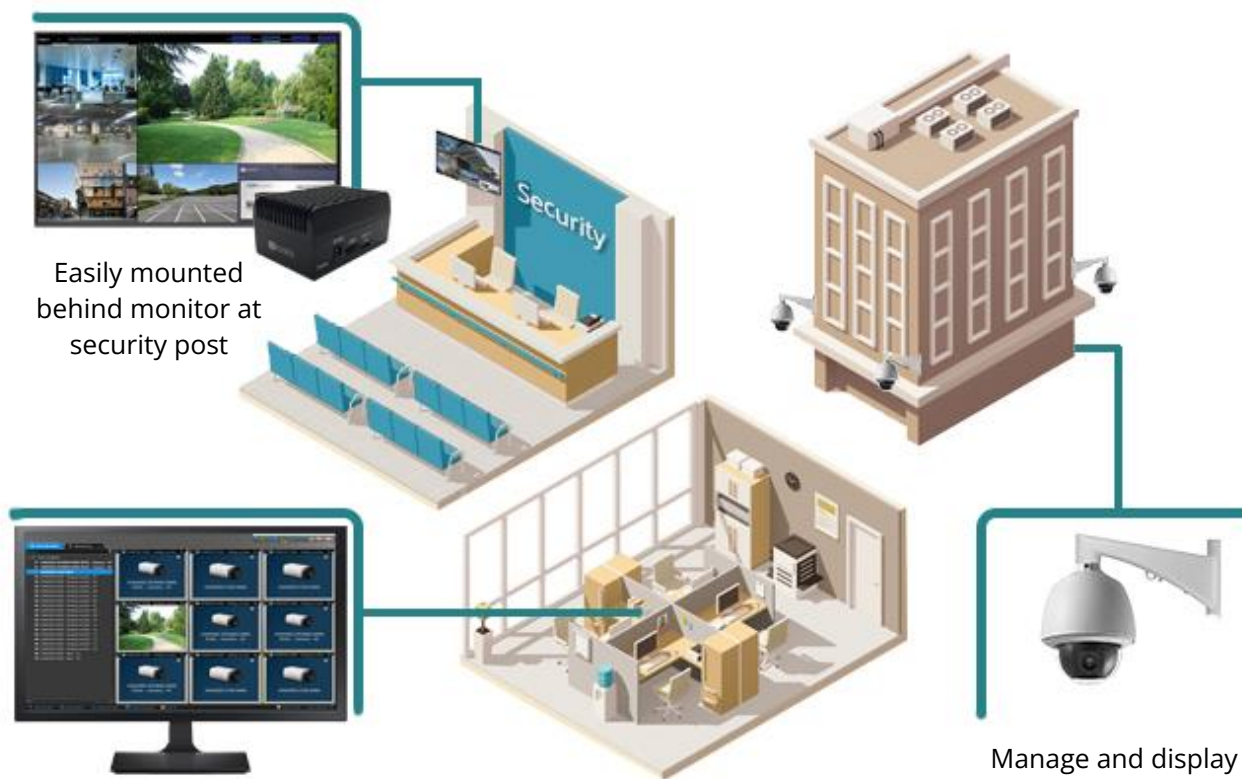

IONODES Secure Display Stations have been designed to use live video monitoring to promote more secure environments. They can display live video on a variety of digital monitors without the cost, complexity and security risk of a client workstation. This is ideal in public areas and in remote sites or facilities with few or no trained security staff. The ION-R100S, ION-R200 and ION-R300 Secure Display Stations can display up to 32 IP video streams, on one, two or three 4K monitors, and can be managed directly through the Genetec™ Security Center interface.

### **Application: Management of remote displays with Genetec™**

Many Genetec™ Security Center deployments have areas in which it is useful to share live video and security information. These areas often share a number of characteristics that make it difficult or ineffective to deploy a full client workstation:

- Staff in the area is not trained or qualified to operate Security Center.
- Backup power is tested regularly leading to regular, brief power loss. This can damage workstations and lead them to get stalled in the reboot process.
- Staff have a number of areas that require live monitoring, such as: Remote gate entrance, high value storage areas, building entrances and exits.
- The video wall is in a public area where a workstation would pose a security risk.

Security Center operators can remotely manage Secure Display Stations (SDS) from the Security Desk application. An SDS can be mounted to the back of a high definition monitor and connected to the secure network. Trained Security Center operators can then control which cameras are displayed on each tile of a display wall layout.

Easily mounted behind monitor at security post

Tiles and layouts can be remotely configured in real-time by security personnel.

Manage and display cameras from across your physical site

### Benefits

- Site security is enhanced by allowing trained security operators to manage the display of video at the site in real-time using the Security Center VMS platform.
- Security cameras are able to deliver operational value in addition to their security benefits.
- Security Messages and Threat levels can be shared throughout a facility via Secure Display Stations.

### Available IONODES Secure Display Stations

Product Part #	Monitors	Max Number of Video Tiles
ION-R100S	1	16
ION-R200	2	32
ION-R300	3	32
